

## Exercise 4.2.4

Kevin Martin  
CIS675 - Syracuse University

February 5, 2020

To modify the code to keep track of what the edges in the shortest path actually are, add to the distance vector the edges  $u$  and  $v$ , and update them accordingly when a shorter path is found:

```
dist[i] = u;  
dist[j] = v;
```
